

Mutual Fund Industry Analytics & EDA Report

Day 3 - Exploratory Data Analysis Report

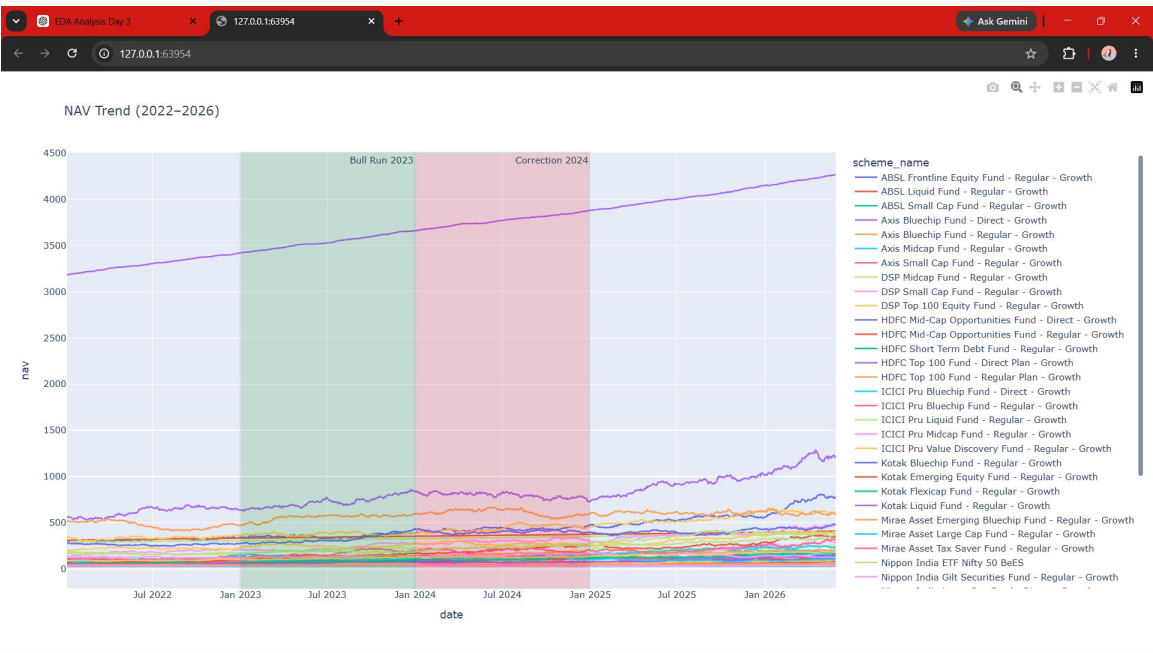

Project Overview

This project analyzes the Indian Mutual Fund industry using NAV history, AUM growth, SIP inflows, investor demographics, folio growth, category inflows, and portfolio holdings. The objective is to identify industry trends, investor behavior, and portfolio allocation patterns through exploratory data analysis.

Dataset Summary

Datasets used: Fund Master, NAV History, AUM by Fund House, Monthly SIP Inflows, Category Inflows, Industry Folio Counts, Scheme Performance, Investor Transactions, Portfolio Holdings, and Benchmark Indices.

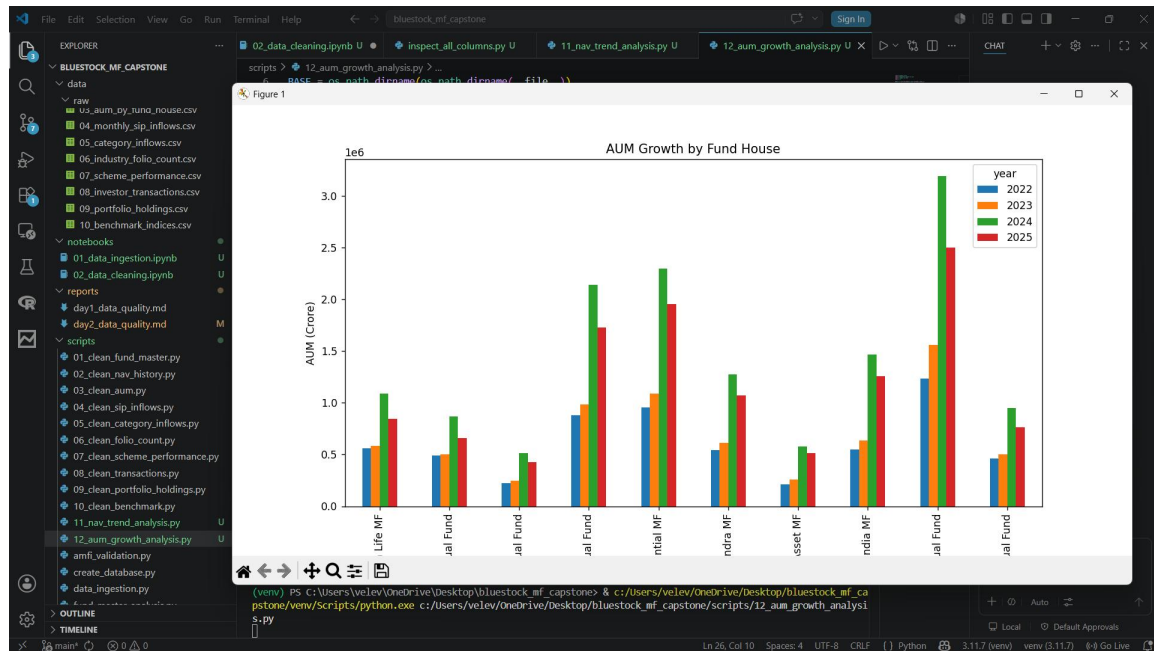

1. NAV Trend Analysis (2022–2026)

Observation: NAV values show strong growth during the 2023 bull run followed by market corrections in 2024.

Insight: Equity-oriented mutual funds benefited significantly from favorable market conditions in 2023.

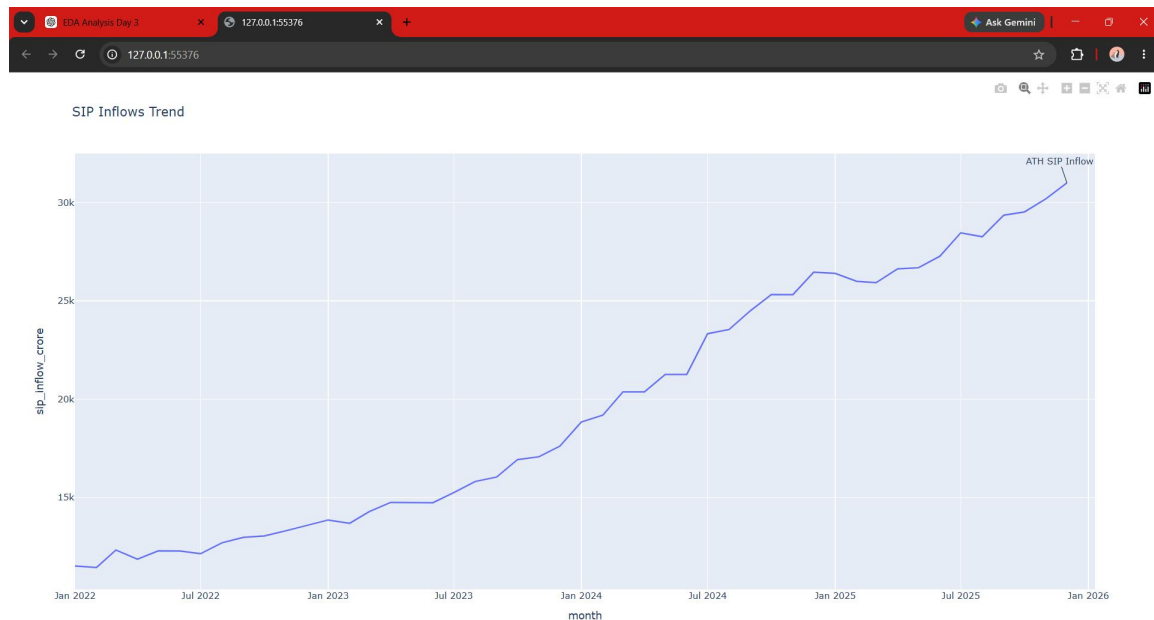

2. AUM Growth Analysis

Observation: Most fund houses demonstrated consistent growth. SBI Mutual Fund maintained the largest AUM.

Insight: Strong investor trust and distribution reach contributed to AUM expansion.

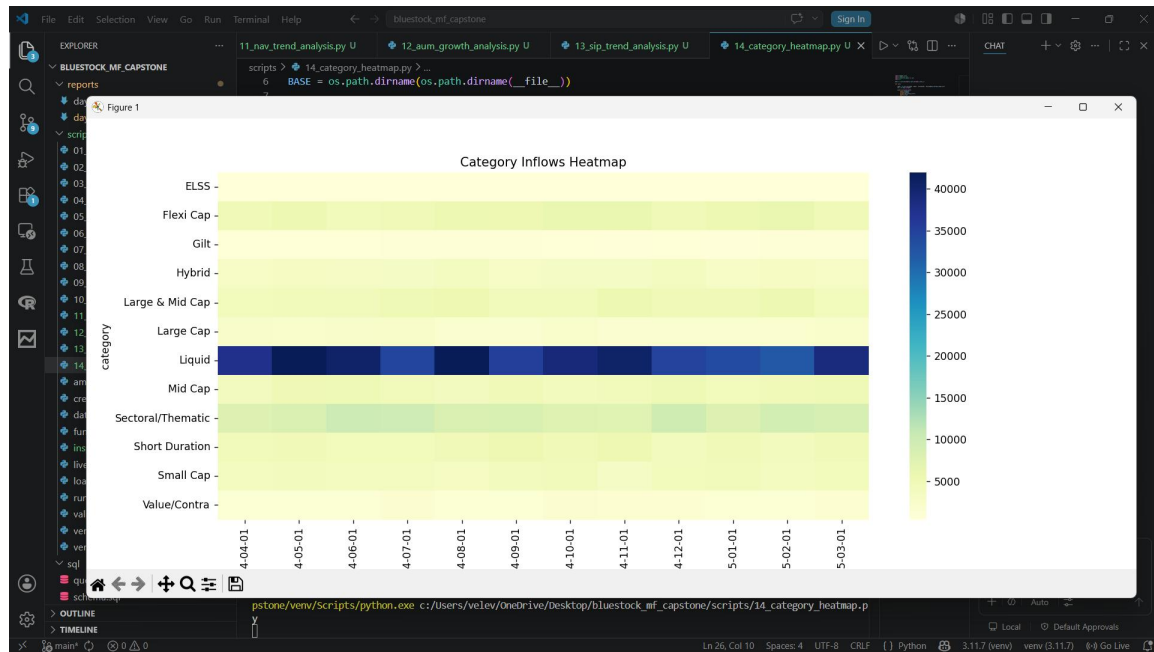

3. SIP Inflow Trend

Observation: SIP inflows increased steadily and reached an all-time high during late 2025.

Insight: Retail investors increasingly prefer disciplined long-term investing.

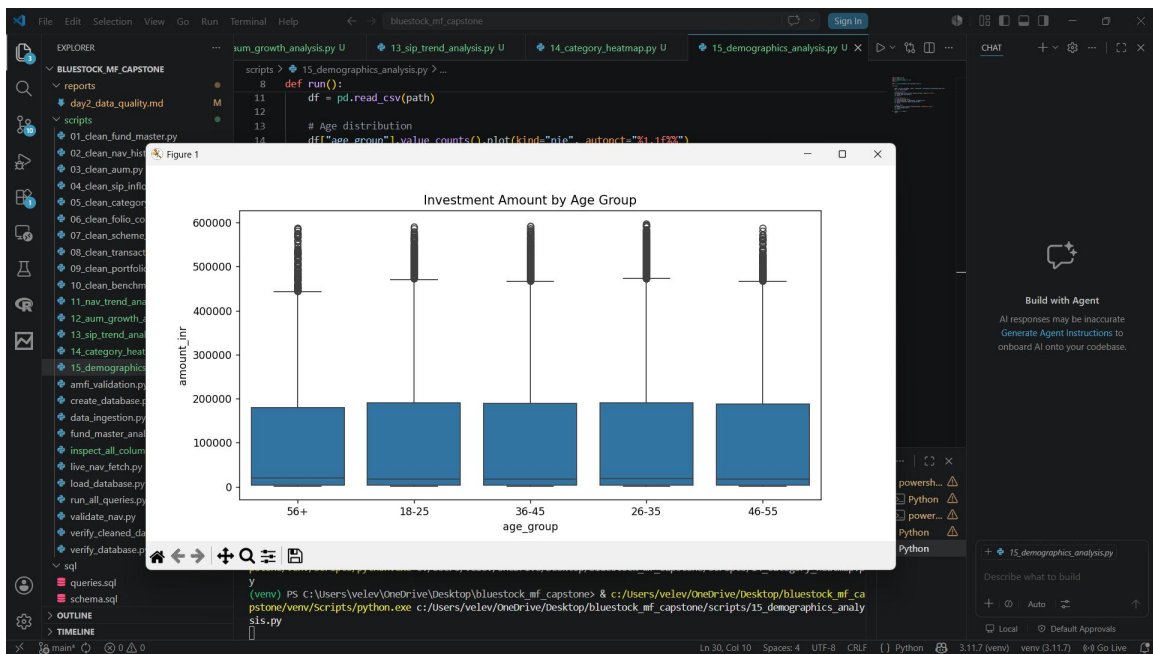

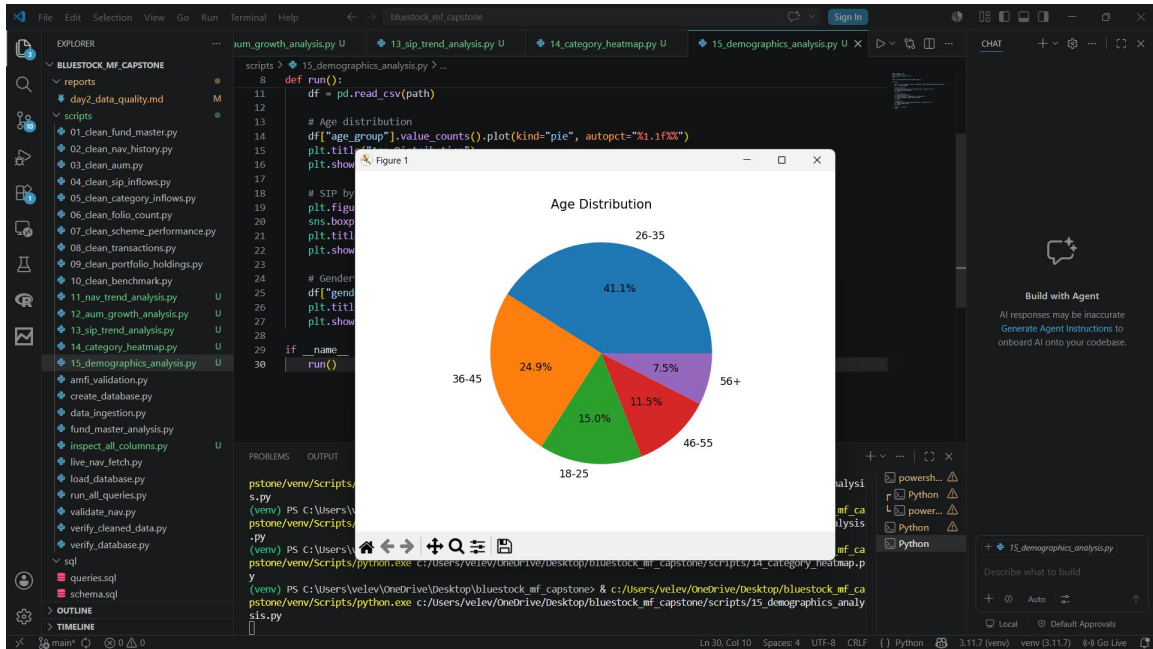

4. Category Inflow Heatmap

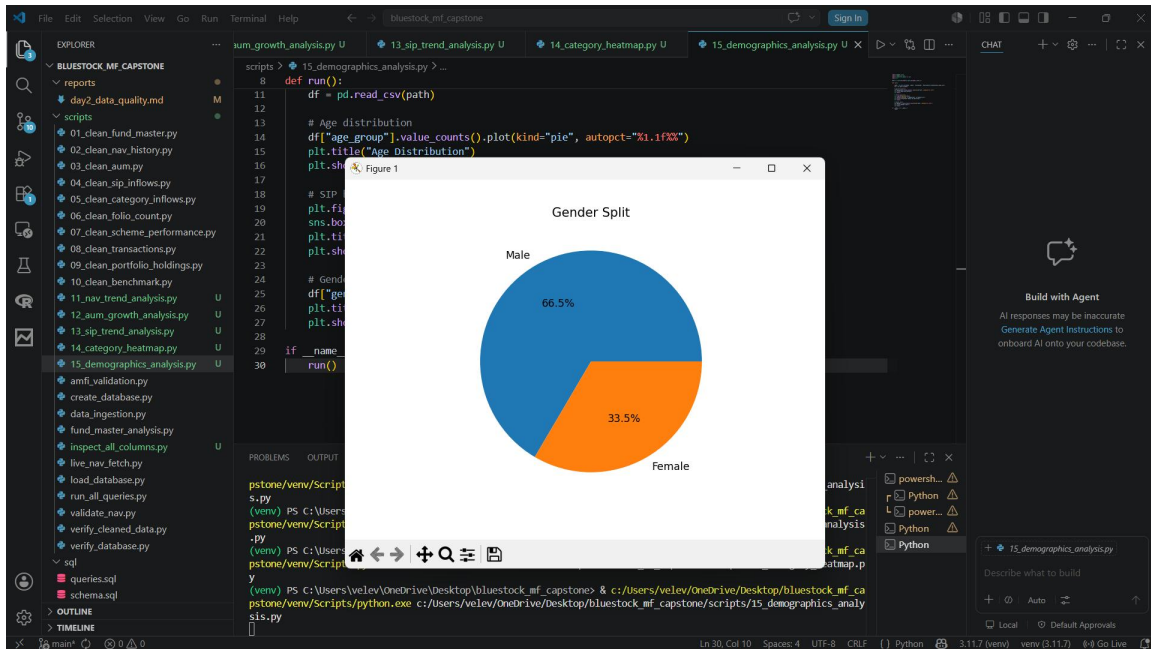

Observation: Different fund categories attracted varying inflows across market cycles.

Insight: Investor preferences shift according to market sentiment.

5. Investor Demographics

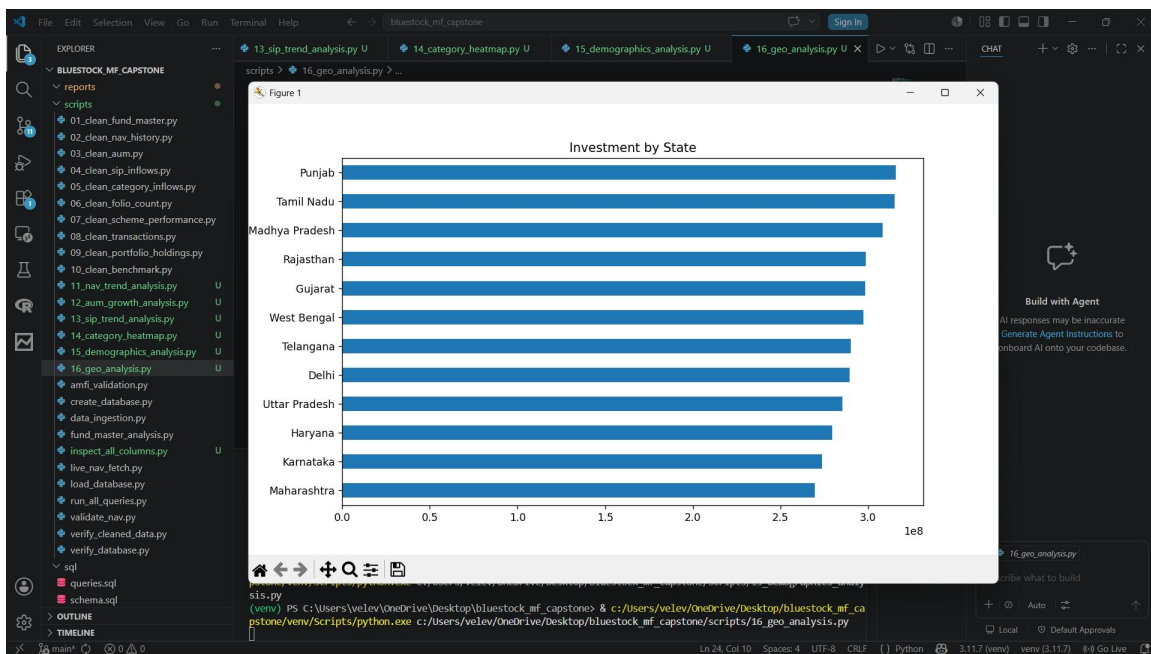

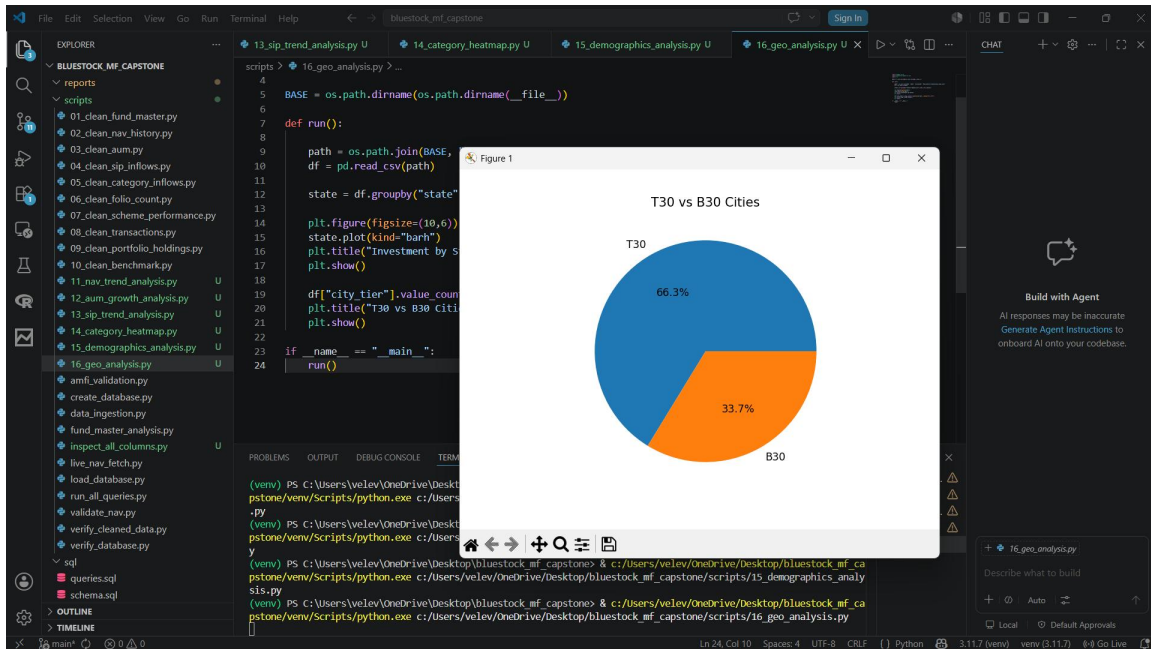

Observation: Younger and middle-aged investors dominate participation.

Insight: Mutual funds are becoming a preferred wealth-building vehicle among younger investors.

6. Geographic Distribution

Observation: Investment participation is expanding beyond major metropolitan areas.

Insight: Mutual fund penetration continues to grow across smaller cities.

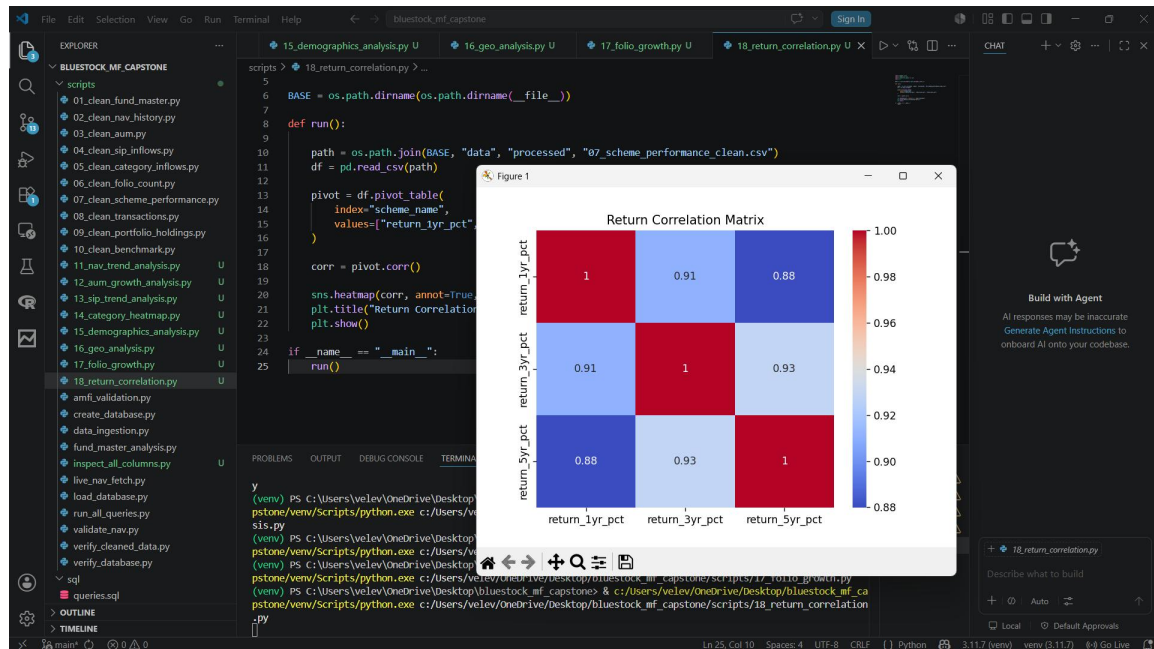

7. Folio Growth Analysis

Observation: Industry folio counts increased significantly between 2022 and 2025.

Insight: Retail participation in mutual funds has strengthened over time.

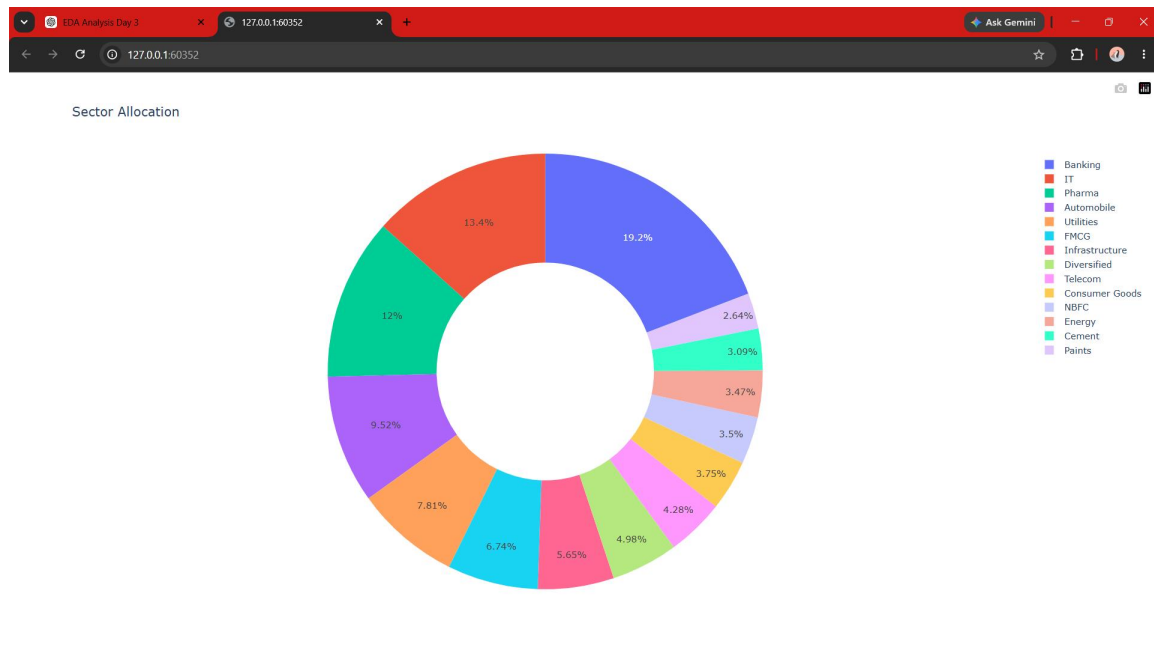

8. Return Correlation Analysis

Observation: Certain return metrics exhibit strong positive relationships.

Insight: Correlation analysis helps identify diversification opportunities.

9. Sector Allocation Analysis

Observation: A few sectors account for a significant portion of portfolio allocation.

Insight: Sector concentration reflects prevailing investment themes.

10 Key EDA Findings

1. NAV values exhibited strong growth during 2023.
2. Market corrections appeared during 2024.
3. SBI Mutual Fund maintained AUM leadership.
4. SIP inflows reached record levels by 2025.
5. Retail participation increased steadily.
6. Folio count nearly doubled.
7. Younger investors form a major investor segment.
8. Smaller cities contributed increasing investment volumes.
9. Correlation analysis revealed diversification opportunities.
10. Financial sectors dominated portfolio allocations.

Conclusion

The Indian mutual fund industry demonstrated robust growth from 2022 to 2025. Rising SIP participation, increasing folio counts, growing AUM, and expanding geographic reach indicate strong investor confidence. The EDA findings provide valuable insights into industry trends and investor behavior.
